SET 2430 – Assignment 5

A. You have a browser with one tab where you start on the homepage. You need to implement:
   1. visit(url) – Visit a new URL (clears forward history)
   2. back(steps) – Move back steps number of steps (return current URL)
   3. forward(steps) – Move forward steps number of steps (return current URL)

B. Implement a LIFO stack using only two queues. The implemented stack should support:
   1. push(x) Push element onto stack
   2. pop() Remove top element
   3. top() Get top element
   4. empty() – Return whether stack is empty
